STATUS OF CLAIMS

Claims 1-16 (cancelled).

Claims 17-23 (allowed).

Claims 24-31 (cancelled).

Claim 32. (previously presented). In the art of electronically copying selected information elements to create a new information body, a method of optimally coordinating the eye, hand, and thought actions of an operator, comprising the steps of: electronically advancing a sequence of information elements at a controlled speed into a known transfer location while visibly displaying each of them there during a dwell time to permit the operator to decide whether to select it for manually directed copying into an output sequence;

after a plurality of the elements have been thus displayed at the transfer location, manually adjusting the speed of the further advance of the information elements and hence the dwell time; and

after that adjustment, advancing the sequence through the same transfer location so as to visibly display additional information elements during the thus-adjusted dwell time to permit each of them to be selected for copying.

Claims 33 and 34. (cancelled).
